

CROPPULSE

One-Page Investor Brief | May 25, 2026

The central digital platform for agricultural intelligence, coordination, and market execution

CropPulse is building one operating layer for farmers, traders, FPOs, customers, and future government-facing programs, starting with live intelligence, market coordination, and multilingual mobile + web distribution.

Farmers

Traders

FPOs

Customers

Government Programs

Multilingual Access

Investor summary: CropPulse already has a live Streamlit-first web product, a distributable Flutter Android app, early trader traction, multilingual UX, and a visible transition path from intelligence MVP to a broader agricultural coordination platform.

WHY THIS MATTERS

8.1 / 10

Strong investor-ready product story when positioned as a live agricultural intelligence and coordination platform expanding into a wider ecosystem.

CURRENT TRACTION

500 traders

REVENUE PROOF

\$5K / month

TEST EVIDENCE

43 / 43 pass

MOBILE BUILD

v1.0.2 (4)

What CropPulse is becoming

CropPulse is designed to become the central digital layer for the agricultural value chain, connecting intelligence, decision-making, listings, buyer discovery, and workflow coordination in one platform.

- **Farmers:** crop guidance, pricing visibility, selling timing, market access

Why investors should care

- **Large fragmented market:** agriculture remains operationally fragmented across production, discovery, pricing, and execution
- **Credible wedge:** CropPulse starts with intelligence and coordination, not generic marketplace claims

Current proof + next scale step

- Live public web app deployed through a Streamlit-first model
- Android delivery workflow with rolling GitHub release assets and update metadata
- Early traction documented in project status materials

- **Traders:** supply discovery, demand visibility, faster coordination
- **FPOs:** aggregation, coordination, and member market support
- **Customers:** direct crop discovery and purchase workflows
- **Government-facing use:** future alignment with digitization, transparency, and ecosystem modernization priorities

Active web surface

Live Streamlit app with OTP flows, localization, marketplace and crop-selection experiences

Active mobile surface

Native Flutter Android app with customer, farmer, trader, market, intelligence, and profile sections

- **Visible execution:** web, mobile, release automation, localization, and testing already exist in the repo
- **Platform logic:** each new user group increases coordination value and data advantage
- **Capital efficiency:** the team has shipped meaningful product breadth before building heavy infrastructure

Best fundraising message: CropPulse is not starting from idea stage. It is already a working agri intelligence product with early proof and a clear expansion path into the central coordination platform for agricultural participants.

- Multilingual product direction already implemented in web and mobile surfaces
- Repo-documented test pass evidence and product documentation support diligence

Use of capital

Production backend depth, transaction rails, analytics, onboarding, and multi-sided market execution

Important discipline

Present CropPulse as a validated platform in expansion, not as a fully completed national agri OS today

CropPulse: intelligence + coordination + execution for agriculture

Prepared from current repo, product surfaces, and status documents reviewed on May 25, 2026.
